RHEON™ ARMOUR

COLLECTION GUIDE

© RHEON LABS

DESIGNED FROM INSIGHT

“We were hearing from users that they wanted armour that felt invisible to ride in, that would still perform when it was needed. So that’s what we set out to create.”

Paul Farrar
Director of Body Armour

Proven to Protect

RHEON™ is an energy absorbing polymer. Soft and flexible in it's natural state, it stiffens dynamically when subjected to an impact.

This dynamic quality allows it to absorb slight knocks and bumps, stiffening up to react to higher-energy impacts in the event of an accident.

This is the next generation of rider protection technology that enhances comfort, safety and the overall ride experience.

Built for Real Rides

Our patented geometric structures enhance breathability and flexibility, whilst also making RHEON™ Armour lighter and more adaptive than ever.

Lightweight. Breathable. Flexible.

RHEON™ Armour is lightweight and made to feel invisible when worn. It delivers CE certified impact protection without restricting movement, so riders can stay focused and comfortable.

The engineered cell structure promotes constant airflow, allowing heat to dissipate naturally. Combined with a dynamic material that remains soft until impact, RHEON™ Armour provides flexible protection that reacts in real time, boosting safety without compromising the riders experience.

Our commitment to sustainability

Post-Industrial Waste

We capture and reuse most of our post-industrial waste while maintaining performance standards. RHEON™ Armour parts can be recycled via our RHE-Cycle™ scheme.

Supply Chain Management

We work only with suppliers who sign our Global Supplier Code of Conduct, committing to responsible labour, environmental and business practices.

Design and Development

We use data-driven design to build lighter, more efficient products. Our rigorous testing ensures durability and reduces waste over time.

Production

We map and reduce CO² emissions across our supply chain. Our HQ runs on 100% renewable energy and we regularly assess Scope 3 impact.

RHE-Cycle™

At RHEON LABS, we're committed to reducing our environmental impact.

That's why we're introducing the RHE-Cycle™ Scheme – our initiative to close the loop on the life-cycle of our body armour.

Our design, development and production methods ensure a long life for your armour. However, if you do need to dispose of it, you can now return it to us so we can recycle the materials, reinventing them into new pieces of our high-performance protective armour – reducing waste and keeping valuable resources in use.

How it works:

Return – Send your used RHEON™ body armour back to us using our prepaid return label.*

Recycle – We'll process the RHEON™ material for reuse in our recycled product line.

Reinvent – Your old gear becomes part of the next generation of sustainable protection – helping us build a more circular future, where protection doesn't come at the planet's expense.

*UK Only
